MMH College, Ghaziabad.

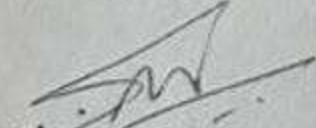

**Sub: Installation of All-In-One Compact AWS Sensor - Reg**

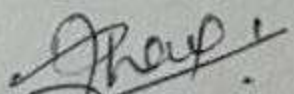

The Indian Institute of Tropical Meteorology (IITM), Pune, is an autonomous institution under the Ministry of Earth Sciences (MoES), Government of India. As per the mandate from the MoES, IITM has launched a dedicated project focused on **Urban Meteorology**—the study of weather and climate behavior over urban regions. For this initiative, the **Union Territory of Delhi/New Delhi and surrounding regions (including NCR)** have been selected as key study zones to install a meso-network of **185 compact All-in-One Automatic Weather Stations (AWS)** to record and monitor urban weather parameters.

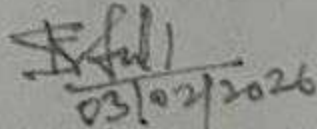

In this context, your esteemed institution/Organisation has been identified as a potential site for installing one of these AWS units. From your side, the only requirement is of **minimal space** (as per attached installation schematic) and a **basic level of security** to ensure uninterrupted operation of the AWS unit. The unit will be powered by its own solar panel system. The installation and maintenance will be managed by trained professionals from our selected vendor: **M/s MeteoXperts Solutions Pvt. Ltd., Noida, Uttar Pradesh**. The AWS will record essential weather parameters such as temperature, humidity, rainfall, wind speed and direction, and atmospheric pressure. Furthermore, we would be pleased to provide access to the **data** from this AWS for academic and research purposes upon request.

We look forward to your kind cooperation in supporting this important scientific effort, which will enhance our understanding of urban weather systems.

With Regards,

  
Dr. Shivasai Ajit Dixit  
Scientist-F (PI)  
IITM Pune
